

Stochastic Modeling On Your Desktop!

MonteCarlito is an Excel add-in that facilitates Monte-Carlo simulation using randomness*.

MonteCarlito is a GNU public licensed add-in for Microsoft Excel.

1. Open codebase
2. Familiar
3. Very fast
4. No admin rights needed!

MonteCarlito makes modeling EXPLICIT!

1. All parameters are specified and preserved.
2. Purpose, assumptions, and data sources are documented with the simulation, not separately.
3. Variables are clear and readable on the model.
4. Run results are preserved in a run table for provenance and auditing.

With **MonteCarlito** on your desktop, you do not have to fall victim to the "The Flaw of Averages!"

You can start using sensible ranges to manage uncertainties in your projects, budgets, and other estimates today!

Training is available and the learning curve is shallow!
